URIs in MARC Pilot Project

- Experiment with one or more relevant areas of interest, and share their findings
- Add URIs in the 024 field in NACO authority records to end the temporary moratorium on adding 024 fields
 - Clean up existing records with URIs in \$a
- Explore adding URIs to other fields where \$0 and \$1 have been established (e.g., 043, 3XX, 5XX)
- Records identified by 667 note
 - 667 URIs added to this record for the PCC URI MARC Pilot. Please do not remove or edit the URIs.
- As of May 18, 2020, there were over 2,400 NARs added or revised by pilot project participants

The URIs in MARC Pilot Project allows participants to experiment with adding URIs to bibliographic and/or authority records. At the University of Washington Libraries, we are working with authority records. Our project involves cleaning up existing records with URIs in the 024 \$a and moving the URIs either to subfield \$0 or \$1 as appropriate. We are also adding URIs to existing and new records that lack them. In addition, we have added URIs to other authority fields for which subfields \$0 and \$1 are defined (e.g., 043, 3XX, and 5XX), as well as in the relationship subfield \$4 in 3XX fields. (Subfield \$4 is also defined in the 5XX fields, but at present OCLC Connexion does not accept it.)

Records enhanced with URIs through the pilot project are identified with a 667 note that tells other NACO participants not to edit or remove the URIs.

As of May 18, 2020, over 2,400 authority records have had URIs added through the project.

667		URIs added to this record for the PCC URI MARC Pilot. Please do not remove or edit the URIs.	

This is an example of an authority record enhanced with URIs. URIs can be seen in the 024, 3XX, and 5XX fields.

Authority Toolkit

- Macro by Gary Strawn (Northwestern University) that works within OCLC Connexion
- UW worked with Gary to add functionality to add URIs to authority records
- Can insert URI based on identifier and source code in 024 \$a and \$2
 - Currently can add URIs for approximately 20 sources, including ISNI, VIAF, ORCID, Wikidata, FAST, CERL, Geonames, Getty TGN, MeSH
- Can do lookups and insert URIs in 043, 3XX, 5XX
 - Currently works with LC vocabularies (LCSH, LCGFT, LCDGT, LCMPT, LC Children's, LC relator terms) and MeSH
 - URIs can be added for \$0, \$1 and \$4 (relationship URIs)

In order to more efficiently add URIs, and to prevent some manual errors, we consulted with Gary Strawn, the creator of the Authority Toolkit, about whether it might be possible to add functionality to the Toolkit to automate some of the process of adding URIs. Gary agreed and has been working with us to provide new functionality. The Authority Toolkit is a macro that works within OCLC Connexion. Currently, it can insert a URI in 024 fields based on the presence of an identifier and source code in subfields \$a and \$2. The Toolkit can insert URIs for approximately 20 sources at present, and more can be added if desired. In addition, the Toolkit can do lookups for LC vocabularies and MeSH terms present in 3XX and 5XX fields and add URIs in \$4 that correspond to MARC relator terms in subfield \$i of 3XX and 5XX fields. Additional lookups in other source vocabularies are also potentially includable.

Example showing a URI for the relationship “setting” in subfield \$4. Subfield \$4 can also be included in 5XX fields, but currently OCLC Connexion doesn’t validate 5XX fields with subfield \$4. OCLC will be fixing this at some point later this year.

Using the Authority Toolkit

- Not the version that is publicly available to everyone
- Functionality continues being developed and improved
- Installs a macro in Connexion
- User can control settings to determine which fields to add URIs to (0XX, 3XX, and/or 5XX blocks) and whether or not to include \$4 URIs
- For 024, identifier and source code must already be present in \$a and \$2
- Once record is ready to have URIs added, macro is invoked
- 3XX fields with multiple subfields are split into separate fields (except 382)
- For 382, will only add URI when just one medium of performance term is present
- 375 currently excluded because \$0 and \$1 not defined (PCC is making a proposal to add these subfields)

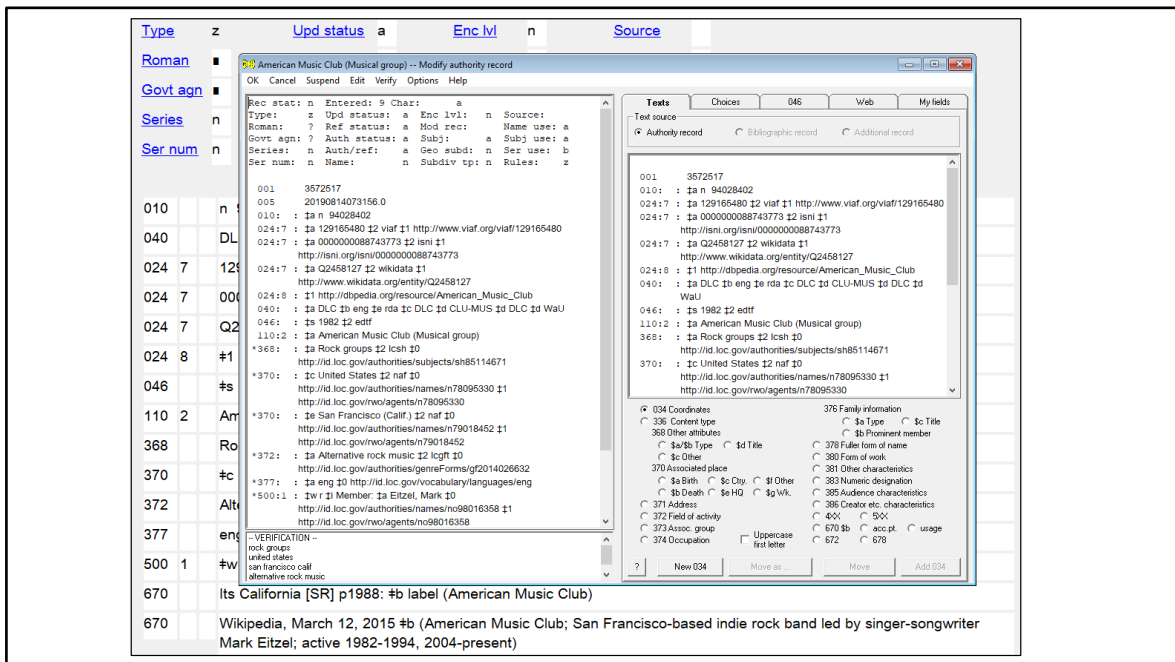

The version of the Authority Toolkit that participants are working with is not the version that is available publicly to any user of OCLC Connexion. This test version will eventually be available to everyone, however. Gary continues to develop and improve the functionality for adding URIs. At the present time, users can control settings that stipulate whether to add URIs in \$0/\$1 in the 0XX, 3XX, and/or 5XX blocks of fields, and whether to also add URIs in \$4. In the 024 field, it does not do a lookup. It uses the identifier and source code in the 024 field and a set of rules based on the Formulating URIs document to insert the correct URI in the appropriate subfield. For 3XX fields with multiple subfields (except 382), it splits the field into separate fields so that a URI is clearly associated with the correct term. For the 382 field (medium of performance of music), it will only add a URI if the field contains a single term. Early on in the project, we discovered that \$0 and \$1 were not defined in field 375 (gender). PCC is making a proposal to add those subfields to the field so that a URI can be given with controlled vocabulary for gender.

This is an example of an authority record with identifiers and source codes in the 024 and attributes and relationships in the 3XX and 5XX fields prior to running the Authority Toolkit macro.

Once the Toolkit macro is invoked, it processes the authority record and after a short period of time returns a screen that looks like this. The cataloger can review the results here and click on “OK” to add the revised record back into Connexion.
